"Now, more than ever, global cooperation and solidarity are critical if we are to rise to the challenges of our time, particularly in dealing with the global commons."

D

The Singapore Cooperation Programme (SCP) was established in 1992 as a
it forward to the international community for the assistance we received
early years. Over the past 30 years, the SCP has focused on enhancing capaci
in our fellow developing countries, training close to 150,000 foreign offici
inception. This underscores our belief in human capital as the single most
resource for a country's development.

The world today is confronted by a perfect storm of overlapping and urgent
ranging from global health and infectious diseases to climate change ar
weather patterns, a food and energy crisis, disruptions caused by digital te
and geostrategic challenges with contestation, rivalry and even war in p
world. Now, more than ever, global cooperation and solidarity are critical i
rise to the challenges of our time, particularly in dealing with the global con

Climate change is a clear and pressing priority which can only be addresse
effective collective action. The SCP will give greater focus to the global su
agenda this year, with the launch of a new Sustainability Action Packag
support the capacity-building needs of developing countries on sustain
climate change. The SAP will cover key areas such as strategies for adap
resilience-building, managing and financing green projects, low carbon de
and carbon markets. Through the SAP, we hope countries will work togeth
knowledge and spur new ideas to forge a more sustainable future. In lin
support for the 2030 Agenda for Sustainable Development, Singapore wi
to share our experience in areas of interest to developing countries, inclu
health governance, digitalisation and education.

Let us continue to work together to protect the global commons and bui
better world for all.

TAINABILITY

SUSTAINABILITY

Climate change is a clear and pressing priority. To combat climate change and its impacts, countries must collectively leverage green opportunities. Marking the launch of the Sustainability Action Package, this cluster will cover a suite of new sustainability-themed courses to share Singapore's journey towards a low-carbon and climate resilient future, covering adaptation and resilience-building strategies, green project management and financing, low carbon development, and carbon markets.
